

## **Fiona Slams Canada and Brings High Waves to Long Island**

By Don Sutherland

Hurricane Fiona, which devastated Puerto Rico earlier last week, made landfall in eastern Canada very early Saturday morning. The storm set a Canadian national record low barometric reading of 931.6 mb (27.51") at Hart Island. Farther south, it brought high surf and rip currents to the Long Island south shore, even as the weather was partly to mostly sunny.

Three photos from Robert Moses State Park:
